## Introduction

Input data:

- File name: HEAT\_202205\_1\_no\_prevpos\_random\_id.csv

Adjustments:

- Multiple Imputation using Chained Equations - MICE
  - Number of imputations: 5

- Number of mice iterations: 5
- Number of degrees of freedom for spline of diagnosis calendar year: 4
- Impute reporting delays inputs: FALSE

Report options:

- Correction of count of cases for reporting delay.
- Original calendar time.
- CD4 plots without inter-quartile range.

## Comparison of data by Gender

### Number of diagnoses per year

Data stratified by *gender* is shown only for unadjusted data since there were no missing data on *gender* after pre-processing, which takes place before adjustments.
